"AquaShield Soft" 5 Stage Water Processor

Softens and Filters Your Water

Computerized Control

Solid State Microprocessor

This microprocessor manages all functions. Back-wash and Rapid Rinse ensures clean filtration—up to 35 GPM High Flow Rate.

Stage 1:

KDF- Copper Zinc Alloy

KDF Media effectively reduces chlorine tastes and odors and acts as an anti-microbial agent to prolong the life of the filter media.

Stage 2:

Crosslinked Cation Resin

Ultra High Capacity 10% crosslinked commercial grade resin softens the water to zero hardness. More efficient than standard resin and lasts up to 50% longer.

Stage 3:

Filter-Ag Sediment Filtration

Highly efficient media of silicate filters water as low as 20 microns, removing suspended solids not visible to the naked eye.

Stage 4:

Catalytic and Coconut Shell Carbon

Reduces chlorine, chloramines, pesticides, and other inorganic and organic chemicals.

Stage 5:

Silica Base Media

Silica Base Media polishes water to a sparkling clarity and provides fast flow rates.
