"AquaClean Green" 6 Stage Water Processor

NO Salt • Potassium • Chemicals
Elimination "NOT" Accumulation

Computerized Control	Solid State Microprocessor Solid State Microprocessor manages all functions. Backwash ensures clean filtration— up to 35 GPM High Flow Rate.
Stage 1:	Copper Zinc Alloy KDF Media effectively reduces chlorine tastes and odors and acts as an anti-microbial agent to prolong the life of the filter media.
Stage 2:	Zeolite Zeolite is composed of rare natural high-purity alumino-silicate minerals refined and graded in the U.S.A. This aids in the reduction of turbidity and provides additional silt and sediment removal.
Stage 3:	Coconut Shell Activated Carbon Using green technology to condition water to make it smooth and gentle while leaving healthy minerals intact.
Stage 4:	Catalytic Carbon AquaClean Media effectively removes chloramines, chlorine, and other inorganic and organic contaminants
Stage 5:	Scale Stop Aqua Guard ScaleStop Media effectively suspends minerals protecting your dishwasher, washing machine, water heater, and more from scale build-up. Template Assisted Crystallization provides 99.6% effectiveness in scale prevention.
Stage 6:	Clarifier Base Media Silica/Quartz Base Media polishes water to a sparkling clarity and provides fast flow rates.
